

**Amendments to the Specification:**

The paragraph which bridges from page 3 to page 4 (the first paragraph following the heading "DETAILED DESCRIPTION," the same as paragraph [0015] in the application published as Pub. No.: US 2005/0168327 A1) is amended as follows:

[0015]        The present invention relates to an improved arrangement for providing power to the terminals of a truck tractor socket which preferably conforms to SAE J560 or another applicable standard. As shown in FIG. 1, a tractor 10 may be in electrical communication with a trailer 12 by means of a cable 14 connecting the tractor to the trailer. As noted above, the cable 14 may include multiple ~~connectors~~ conductors connected to respective terminals of plugs 33 at each end of the cable. The plugs 33 are matable in sockets 32 mounted, preferably, in openings in the opposing faces of the tractor 12 and the trailer 14. If, as preferred, the sockets 32 conform to SAE J560, plugs 33 also should conform to that standard.
